

## Small improvement in stunting levels

Percentage of 12-year-old children stunted

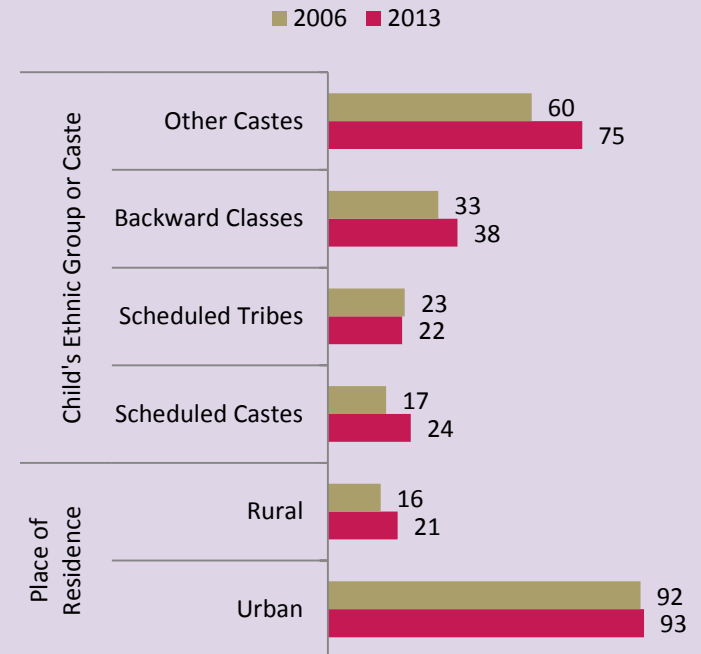

Almost five percentage points decline in stunting among 12-year-olds. Yet, high rates continue for poorer children and those in rural areas.

## Almost universal access to clean water

Increased from 84% in 2002 to almost 99% of Younger Cohort children in 2013.

## Gaps in access to sanitation continue

Percentage of 12-year-old children with access to improved sanitation

Urban children and socially advantaged groups continue to have better access to clean water and sanitation than children in rural areas and marginalised groups.
